1 Definition

1.1 Defintion

Let Prop be a set of variables. Then a formula ϕ is defined as follows :

$$\phi ::= p \mid \bot \mid \phi \mid \phi \rightarrow \phi \mid \Box_i \phi$$

where $p \in Prop$ and $\Box_i$ is a modal operator. Other connectives are expressed through $\bot$ and $\rightarrow$ and dual modal operators $\diamond_i$ as $\diamond_i \phi = \neg \Box_i \neg \phi$

1.2 Defintion

A normal modal logic is a set of modal formulas containing all propositional tautologies, closed under Substitution ($\frac{\phi(p_i)}{\phi(\psi)}$), Modus Ponens ($\frac{\phi, \phi \rightarrow \psi}{\psi}$), Generalization rules ($\frac{\phi}{\Box_i \phi}$) and the following axioms

$$\Box_i(p \rightarrow q) \rightarrow (\Box_i p \rightarrow \Box_i q)$$

K_n denotes the minimal normal modal logic with n modalities and $K = K_1$ Let L be a logic and let Γ be a set of formulas. Then L+Γ denotes the minimal logic containing L and Γ

1.3 Definition

Let L1 and L2 be two modal logic with one modality $\Box$. Then the fusion of these logics are defined as follows :

$$L1 \otimes L2 = K2 + L_{1(\Box \rightarrow \Box_1)} L_{2(\Box \rightarrow \Box_2)}$$

The follow logics may be important

$$D = K + \Box p \rightarrow \Diamond p$$

$$T = K + \Box p \rightarrow p$$

$$D4 = D + \Box p \rightarrow \Box \Box p$$

$$S4 = T + \Box p \rightarrow \Box \Box p$$

2 Topological Space Defintion

2.1 Defintion

A topological space is a pair (X, τ) where τ is a collection of subsets of X (elements of τ are also called open sets) such that :

1. the empty set $\emptyset$ and X are open
2. the union of an arbitrary collection of open sets is open
3. the intersection of finite collection of open sets is open

A topological model is a structure M = (X,τ,v) where (X,τ) is a topological space and v is a valuation assigining subsets of X to propositional variables.

2.2 Defintion

Let M = (X,τ,v) a topological model and $x \in X$. The satisfaction of a formula at the point x in M is defined inductively as follows :$M, x \models \Box\phi$ iff ,$\exists U \in \tau$ s.t $x \in U$ and $\forall u \in U : M, u \models \phi$
$M, x \models \Box\phi$ iff ,$\exists U \in \tau$ s.t $x \in U$ and $\forall u \in U : M, u \models \phi$
$M, x \models \Diamond\phi$ iff ,$\forall U \in \tau$ s.t $x \in U$ and $\exists u \in U : M, u \models \phi$
